

CASE STUDY

ZyLAB eDiscovery

The Customer

Our customer is a multinational diversified producer of consumer food products with over \$5 billion in annual sales. The company operates in North America over more than 20 locations in many different states and provinces. Around the world the customer has operations in over 12 countries.

The Business Case

The client has thousands of employees, and like any large employer, the majority of their lawsuits involved small employment and contract cases. The eDiscovery cost of hundreds of small cases plus the handful of larger IP and products liability cases proved out the ROI for the system. The legacy data cleanup of excess risk and potential costs was additive to the ROI.

CASE STUDY

ZyLAB eDiscovery

ZyLAB's Solution

ZyLAB provides an in-house eDiscovery system that is used for many hundreds legal cases per year. After the initial deployment of the system, the customers in-house eDiscovery team also started using the software to process legacy data from remote locations as part of a larger data center and server consolidation process in preparation for moving to the cloud.

During this departmentally decentralized process, documents are not only assessed for their content to determine whether there is a regulatory reason, business value or litigation hold requiring their retention. Additional screens include Personally Identifiable Information, Protected Data, data leakage and trade secret.
